Watts Riot Subsides; Two Slain

By JOHN BURKS
Tribune Staff Writer

LOS ANGELES—A wet smog hung low over the city today, cooling off the Watts district, where an ugly new outbreak of violence flared yesterday.

"We're just keeping our fingers crossed," said Inspector Daryl Gates of the Los Angeles police force on duty in the heart of the troubled area patrolled by increased numbers of officers. A white truck driver was beaten and shot to death and a Negro man was killed by sniper fire yesterday afternoon during wild but short-lived rioting by 600 persons, mostly Negro youths.

A quick and massive deployment of police was credited with preventing a potentially more serious situation.

The outburst, triggered by the arrest of a Negro who threw rocks at a white teacher outside a school, was checked except for sporadic incidents within three hours. Several hundred officers cleared the streets of crowds who hurled missiles and Molotov cocktails, overturned cars, looted stores and started fires.

UNEASY QUIET

"It looks like the trouble has died down, but we thought it had died last August too after the first day," Gates said.

Police found out differently as the August rioting and burning and looting stretched on for five days before police, sheriff's officers, and the National Guard could contain it.

"The main thing we're doing differently this time is to remain on the scene," said Inspector Gates who commands the 200 men patrolling the 192-block area through the continuing emergency.

TIGHT SECURITY

Security is tightest along the 103rd Ave. business district — worst hit of all by the fires of last August — where no private cars are allowed to drive even today. A cordon of blue uniforms guards every intersection.

"We have found the best way to stop trouble is to stay put in the areas where trouble is most likely to happen" Gates said.

Outside the 103rd Ave. police command post — at the opposite end of the Watts business district from Jordan High School, but where the trouble started yesterday — police milled about, ready to relieve fellow officers who patrolled the crisis area four to a car with shotguns and carbines at the ready.

POLICE PREPARED

The police are ready for an explosion any time.

But Inspector Gates does not think it is as likely this time as last.

"Yesterday afternoon we were going from place to place breaking up crowds," he said "and I thought the atmosphere was quite different. This time I

Petitions Ask Sewer Boat Probe

By CLAUDIA HUTCHINGS

SAN LORENZO — Petitions were being circulated here today asking the Ora Loma Sanitary District board of directors to "investigate the possible misuse of funds," citing the purchase of a district-owned $15,000 cabin cruiser as an example.

At the same time today the sanitary district is headed for its first election in eight years with announcement by Thomas Pierce, member of the Eden Township Hospital Board, that a slate of candidates is being formed to oppose three incumbents at the June 7 election.

NEW CANDIDATE

Simultaneously, W. E. Winterbourne, former director of The San Lorenzo Village Homeowners Association, today announced his candidacy for one of the three posts up for grabs this year. He has not yet filed.

It will be the first contested election in the district since 1958. Filing deadline is March 22.

The furor in the district was triggered with disclosure that the district purchased the 29-foot luxury craft — "Aqua Furs" — for testing water samples in the Bay but has rarely used it for this purpose.

SALARY REVIEW

The petitions also ask a review of the $23,400 salary paid to district manager Gerald Worthley.

Mrs. Norman Sisson, 29, of 969 Bevilacqua St., said she and several other housewives will contact the residents of San Lorenzo, San Leandro, Ashland, Cherryland and parts of Hayward — all within Ora Loma's boundaries — to seek public support for the investigation.

The petitions will be presented to the board Tuesday, 8:15 p.m., at their regular meeting. A large delegation of area residents is expected to attend the session.

The salary paid to Worthley seems "inequitable," Mrs. Sisson noted, since Worthley is not an engineer but a retired railway postal clerk.

A check with other sanitary districts revealed that only one

House Votes Daylight Time for All

WASHINGTON (UPI) — The House voted Wednesday to put the entire nation on daylight saving time next year. The action was taken amid charges of "double daylight time" and "daylight time in reverse." There would be one way out: a state legislature could vote to exempt the entire state and leave it on standard time. But if the state failed to act, daylight time would start automatically on the last Sunday in April and end on last Sunday in October.

WASHINGTON (UPI) — When it's daylight time in Indianapolis it's standard time in Lebanon, Ind., and Rep. Ray J. Madden, D-Ind., said the bus ride from one to the other takes about 60 minutes.

So this country fellow went to the big city bus station and asked when the next one was leaving. The ticket agent told him 10:30, as Madden related the story at a meeting of the House Rules Committee Tuesday.

"What time does it get to Lebanon?" the prospective traveler asked.

"10:30," the agent replied.

The customer ambled away, then sidled back up to the counter. "What time did you say the bus left?" he asked again.

"10:30," the agent dead-pan.

"And when does it get there?"

"10:30," came the reply.

The countryman edged off again. The agent called after him, "You want to buy a ticket on that bus or don't you?"

"No," the fellow replied. "But if you don't mind I sure would like to stick around and watch 'er take off!"

Gemini 8 Space Chase On; We'll Win Moon Race—LBJ

Soviet Dogs Down From 23-Day Orbit

MOSCOW (UPI) — Russia's two space dogs that orbited for 23 days through a radiation belt returned safely to earth today, the official Tass news agency reported.

Tass said the space dogs were in good condition.

The dogs, Blackie and Breeze, became the first living beings to pass through Van Allen radiation belts — more than 550 miles above the earth — and survive. It was considered a major experiment in radiation.

Soviet sources said the dogs' flight was a rehearsal for a manned flight soon by two or more cosmonauts along a similar orbit.

The sources said the flight proved the reliability of new radiation shields designed for Soviet spaceships — the same kind of shields that will be vital when spacemen begin to fly to the moon.

No man or beast ever survived such a flight before. The first dog in space, the Soviet's Laika, flew twice as high in 1957 but died when the space ship disintegrated. The manned altitude record of 308 statute miles was set on March 18, 1965, by the Voskhod 2. The U.S. record is 217 miles reached by Gemini 5.

Blackie and Breeze were launched Feb. 22 into a cucumber-shaped orbit ranging between 303 miles and 116 miles.

For 23 days, the dogs took them in and out of the treacherous Van Allen belts twice every 90 minutes.

Soviet sources said the flight of the two dogs proved so successful that two or more men will be launched within weeks along basically the same path. It will be Russia's first manned flight in more than a year.

If the men fly so high, they will soar three times higher than any man saw ever flown.

And if they fly so long, they will break the current orbital endurance record of two weeks held by the American Gemini 7 crew.

SUITED UP AND STOWED IN SPACECRAFT, ASTRONAUTS AWAIT BLASTOFF

Perfect Dual Rocket Launchings

Compiled from AP and UPI

CAPE KENNEDY, Fla. — A spectacular launch doubleheader got the Gemini 8 space venture off to a perfect start today and President Johnson immediately predicted that the United States will beat Russia to the moon.

The Gemini 8 astronauts soared into orbit and began stalking an Agena target satellite across the sky — aiming for the first linkup of two orbiting space ships.

After watching the two booster rockets blaze away precisely on schedule, an elated President Johnson said publicly for the first time:

"We are going to be the first to land a man on the moon and we will land him in the 1970s."

WILL STAY AHEAD

"We have caught up (in the space race) and we are going to pull ahead . . . I want to depose once again that so long as I am in public office this country will never again fall behind," Johnson added.

After their storybook blast-off into space, the two Gemini astronauts were given a "go" for at least 15 orbits around the earth.

Spacemen Neil Armstrong and David Scott expected to close in on the Agena late today after a fantastic 105,000-mile chase and complete the historic docking at 3 p.m. PST high above South America.

ORBIT CHANGE

At 11 a.m. PST, Armstrong gave the Gemini 8 a burst of power — his first major maneuver — boosting the low point of the orbit to 134 miles and slightly slowing the catch-up rate on the target Agena. But by then he had already narrowed the gap between Gemini and its target to some 460 miles. Flying in a lower orbit, the Gemini 8 catches up because it covers a shorter track around the earth.

The excitement of the Armstrong-Scott flight was not to end with the initial catch and hookup with Agena. Three additional linkings were planned and tomorrow Scott is to drift out a hatch door into the silent emptiness of space to be — for nearly 2½ hours — a speeding human satellite.

MOON FORERUNNER

By the time the astronauts return to earth on Saturday, it all goes as planned, they will have rehearsed many of the vital techniques that must be perfected before men venture to the moon.

The great space hunt started at 8:41 a.m. PST with the thundering blastoff of a Titan 2 rocket from Cape Kennedy. The 108-foot tall projectile vaulted upward on a blazing tail of hot gases and drilled Gemini 8 into

France Switches On Mart

By RAYMOND LAWRENCE
Foreign News Analyst

France, in a remarkable switch, today announced it now believes that Britain should join the European Common Market.

Only two years ago France vetoed Britain's bid for membership and dramatically upset European plans for economic integration that eventually some hoped, would lead to political integration.

But in its reply today Britain said that France's announced military withdrawal from the North Atlantic Treaty Organization constitutes a new factor that impedes Britain's participation in the six-nation continental trading bloc called the Common Market.

NEW PROBLEMS

This exchange of views, which creates new problems for the closer association of the European nations and United States' relations with them, took place at the two-day meeting of the Western European Union ministers in London.

British Foreign Minister Michael Stewart announced the new French position after presiding over today's meeting.

The ministers discussed various problems relating to European unity and economic cooperation as well as the critical situation created by the French withdrawal from NATO's integrated military command and exclusion of headquarters and foreign forces from French territory.

REPLY ON NATO

The other members of NATO, including the United States, now are considering a joint reply to President de Gaulle's unilateral NATO decision and what steps must be taken in a reorganization of the command setup.

Stewart said today of the Common Market "what obstacle to Britain's entry that did exist

Berlin Red Guards Kill Two Boys

BERLIN (UPI) — Eastern border guards Monday night shot and killed two boys trying to flee to West Berlin, it was reported today.

The boys, 19 and 13, were said to have been shot down on the border of the American sector. Each was hit by more than 20 bullets and died later in a hospital, the reports said.

West Berlin police Monday night reported shots on the border and the arrival of an ambulance. But in the darkness they were not able to see what was happening.

$6 Billion Tax Boost Signed; 'Better Social Security' Push

WASHINGTON (AP) — President Johnson has signed a bill to bring the government about $6 billion in additional revenue over the next 15 months. He used the signing ceremony to announce he plans to ask Congress next year to make "Social Security benefits more adequate."

Johnson gave no details but said he has asked Welfare Secretary John W. Gardner to make a study of possible improvements in Social Security. The bill the President signed Tuesday night — within three hours after Congress gave it final approval — grants Social Security coverage to about 200,000 persons over 72.

The signing ceremony capped a busy day for the President and Congress which saw the advancement of four money measures to bolster the nation's Viet Nam war effort.

Tax Tables, Page 20

The first effect of the tax bill is to increase from 6 per cent to 7 per cent starting today the excise tax on car sales. The measure also reinstates as of April 1 the 10 per cent tax on phone calls — the levy is now 3 per cent — and provides speedups in collection of corporate and personal income taxes. The latter takes effect May 1.

The bill is expected to provide some $1.2 billion in extra money by June 30 and $4.8 billion during fiscal 1967 starting July 1 to help finance the Viet Nam war.

Johnson again said he could make no prediction now whether additional tax rises will be necessary later this year but added "you may be assured that this Administration stands

FLIES ATTACK CHILD'S EYES IN WESTERN INDIA
Country is hard on the elderly and very young.—(AP)

India's Hope And Despair

By CONRAD FINK

NEW DELHI, India (AP) — The tired tip-tap of their hammers sounds through rock quarries. Their quick eyes flit watchfully over herds of cows. Their gay laughter bleeds with the roar of coastal surf.

These are the children of India, and in their faces is the story of this impoverished nation's cruel economic troubles and its hope of a better tomorrow.

Nowhere is the gulf between reality and dream as clearly portrayed as in young faces.

It is the children among India's 480 millions who show the pinch of malnourishment. Some have scab-covered legs and gummy eyes that betray rampant disease.

But in their laughter lies the hope.

In the state of Kerala, a 7-year-old girl sits under the blazing sun, chipping small rocks into smaller pieces.

Her future is 100 yards away, where old women chip big rocks into small rocks. Her brother's future is farther up the rock face, where men drill all day, shrouded in choking dust.

A child chips for eight hours like this and still doesn't earn enough to eat as humans should.

In the rock quarries, the young faces don't smile. The eyes don't twinkle. The run
