SPECIAL VISION 2020 REPORT

DARK AND BRIGHT FORCES OF SCIENCE

Technology offers both progress and the seeds of our own destruction

FIFTH OF SIX PARTS

By Roland De Wolk
The Tribune

From the people who brought you a vaccine for polio and a formula for nuclear war: Get ready for the 21st century.

The paradoxical advances of science and technology that have engulfed modern society in this century are bound for destinations too wonderful — and horrific — to envision.

That outlook for the future, some of the most thoughtful observers of modern science say, results from a frightful contradiction in scientific research: Nestled within the marvels of its progress are the seeds of human destruction.

"Without a doubt," said Elisabeth Lloyd, an assistant professor of philosophy at UC-Berkeley, "as we move to have ever increasing control over nature there will be a growth in some of the unseen consequences.

"Look at pesticides," said Lloyd, who specializes in the philosophy of science. "They have furthered someone's cause, but they have also caused a lot of problems. I think we've just seen the tip of

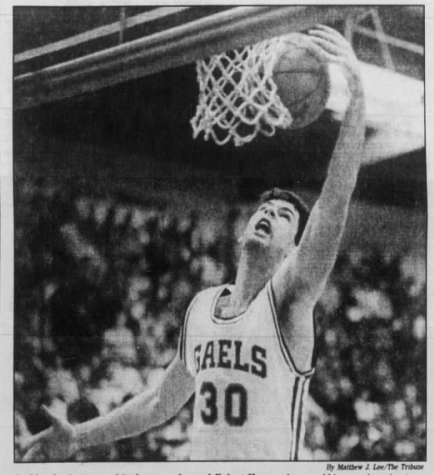
ON WINS AND A PRAYER

GAELS FEVER



By Matthew J. Lee/The Tribune

St. Mary's pins some of its hopes on forward Robert Haugen, here grabbing a rebound.

NCAA-bound St. Mary's team puts little college back on map

By Kelly Gust
The Tribune

After 30 years of waiting for a miracle, Brother Jerome West knew his basketball prayers were going to be answered the day he spotted scalpers outside the gym.

"We couldn't even get students to walk across campus to attend games before," West said. "When I saw the scalpers I said, 'Now, at last, St. Mary's has arrived!'"

After many dismal years of poor attendance and so-so basketball teams, the St. Mary's College Gaels are hot. In the past year, as the team racked up 25 wins in 29 games, Gaels fever has been building. And fans, who have paid scalpers triple the going rate for seats to this season's soldout

A $4.1 billion affordable housing plan

By Laura Mecoy
McClatchy News Service

WASHINGTON — California Sen. Alan Cranston unveiled a massive overhaul of the nation's housing programs yesterday that is designed to attack the problem of homelessness and bring homeownership within the reach of many Americans.

The Senate's No. 3 ranking member, with the support of one-fourth of the upper chamber, introduced the $4.1 billion "National Affordable Housing Act" to expand the nation's supply of affordable housing and provide special services for the elderly, handicapped and homeless.

The Democratic lawmaker, who chairs the subcommittee that will act first on the measure, told a Capitol press conference that the bill would create 520,000 units of affordable housing over two years for moderate- and low-income people and help 70,000 to 80,000 low-income people pay their rent. "The ob-

Soviet agrarian policy to undergo radical shift

By Bill Keller
The New York Times

MOSCOW — Mikhail S. Gorbachev yesterday called for a radical reversal of the Soviet Union's 60-year history of centralized farming, including the immediate dismantling of the state agricultural bureaucracy and the gradual introduction of free markets.

The Soviet leader's proposed "new agrarian policy," outlined at the opening of a critical party meeting on the nation's food crisis, would give different areas wide latitude to choose among various types of collective and private agriculture.

Gorbachev called for new legal guarantees to allay the anxiety of private farmers and other experimenters, a new system of cooperative banks and stock markets to finance them, and more flexible prices to reward those who succeed.

After a transition period, he said, farmers must be given "complete freedom" to choose ways of marketing their products.

In most cases farmers now deliver their goods to the state at

Navy clogs garage channel

Hundreds of car owners can't open automatic doors

By Bill Snyder
The Tribune

The U.S. Navy apparently has launched an inadvertent sneak attack against one of the prerequisites of comfortable suburban life: the automatic garage door opener.

Radio transmissions from a naval ship docked in San Francisco Bay are clogging some of the frequencies used by the handy devices, and will continue the annoying interference until about May 2, a source in the federal government said yesterday.

The official, who asked not to be named, said radio signals from the warship are being amplified by the transmitter atop Mount Diablo. The problem, which has affected homeowners from Livermore to Concord, will continue until the warship leaves and may reoccur when it returns, he said.

Lt. Joe Murphy, a spokesman for Naval Base San Francisco, said "we are looking into this," and will have more information today.

According to the Navy, there are three major ships docked at the Alameda Naval Air Station: the aircraft carriers USS Enterprise and USS Carl Vinson and

U.S. gun maker halts sales of AR-15 semiautomatics

By Jay Mathews
The Washington Post

Colt Industries, in an unprecedented action for a major U.S. weapons manufacturer, suspended sales to the public yesterday of its popular AR-15 semiautomatic rifle, the civilian version of the U.S. military's standard M-16.

Mike Dunn, a spokesman for the company's Connecticut-based firearms division, said it acted voluntarily in response to the temporary ban on the import of foreign-made semiautomatic assault rifles announced by the Bush administration Tuesday.

Dunn said the company would sell AR-15s only to police departments and other government agencies while the federal government investigated how such weapons are being used.

Gun control advocates, noting that the AR-15 appears to be the most popular U.S.-made rifle among drug dealers, said they

U.S., Chile pressing to resolve fruit crisis

By Marlene Cimons
Los Angeles Times

WASHINGTON — Under intense pressure to resolve the Chilean fruit crisis, federal Food and Drug Administration officials and Chilean government representatives yesterday labored to forge a system to prevent tampering of fruit exports from Chile and to allow the release of tons of impounded produce stacking up in refrigerated warehouses in U.S. port cities.

"It's important to bring a restoration to nor-
