Study suggests aspirin stops heart attacks in women

By Daniel O. Haney
The Associated Press

BOSTON — A major study provides the first evidence that healthy women who take aspirin regularly can significantly reduce their risk of heart attacks, just as men do.

The work, based on a six-year follow-up of female nurses, showed that those who took between one and six aspirin tablets a week reduced their heart-attack risk by about 30 percent.

Evidence has been mounting in recent years that regular aspirin use significantly reduces the chance of heart attacks, the nation's biggest killer.

But until now, most of the evidence has come from men, and experts have been unsure whether aspirin works for women, too.

The new study, conducted at Brigham and Women's Hospital in Boston, was presented yesterday in Orlando, Fla., at an epidemiology conference sponsored by the American Heart Association.

Dr. Charles Hennekens, senior author of the study, said more research will be necessary to learn just how much women may benefit from aspirin use.

"In the meantime," he said, "for a physician wondering whether to generalize the aspirin data to women, this provides the possibility of a benefit that is comparable to that in men."

The study was based on 87,678 nurses who ranged from ages 34 to 59. All were free of outward signs of heart disease when the study began in 1980.

Arctic cold front expected to bring rain, unseasonable chills

Tribune staff writer

LAST NIGHT'S wintry temperatures will usher in a weekend of cool nights and a chance of rain in the Bay Area tonight and tomorrow.

Clear skies and a cold front were expected to send temperatures plummeting to record lows early this morning. Parts of the Bay Area may have dipped to freezing, with lows ranging from the mid-20s in sheltered valleys to the low 40s, according to the National Weather Service.

An Arctic storm that forecasters had said might be the biggest of the season is being stalled by weather patterns off the central West Coast, said National Weather Service forecaster Norman Hui.

Instead of blasting the Bay Area today or tomorrow, it will arrive in a less formidable form, dousing the Bay Area with extended showers on Monday and Tuesday, he said.

The weekend will not be graced with more of the snow that delighted Eastbay residents when it dusted Mount Diablo early yesterday morning.

Two inches of snow fell on the 3,849-foot summit, Hui said.

Clouds will gather in the Bay Area this afternoon, and showers probably will pelt the

U.S., Soviets fail to narrow arms talks gap

By David Hoffman
The Washington Post

MOSCOW — Secretary of State James A. Baker III failed to resolve differences over arms control treaties with the Soviet Union during meetings here yesterday, but said U.S.-Soviet relations were improving.

"The relationship has gone through a test recently and it has survived," he said. "That is good for the Soviet Union and good for the United States and good for the world."

Disagreements over details of a strategic arms reduction treaty with the Soviet Union and over interpretation of a treaty limiting conventional forces in Europe are holding up the scheduling of a U.S.-Soviet summit here.

In separate meetings with Soviet President Mikhail Gorbachev and radical reformers who are challenging the Kremlin, Baker also plunged into the volatile Soviet domestic political scene here two days before a national referendum on whether to preserve the union.

After raising with Gorbachev the U.S. concerns over Soviet policy toward the Baltics and the slowing of economic reform, Baker said last night that he felt Gorbachev had taken steps to defuse the Baltic situation since a spate of violence in January, and he said Gorbachev had reiterated his commitment to perestroika.

Last night Baker dined at the American em-

Regents approve People's Park plan

By Dara Tom
Tribune staff writer

BERKELEY — After two decades of controversy, University of California regents yesterday accepted an agreement that will make a real park out of the scrubby field dubbed People's Park that has become a campground for the homeless.

Two Berkeley City Council members said they hope the agreement will end disputes between the city and the university over what to do with the 2.3-acre tract at Haste Street and Telegraph Avenue.

Regents accepted the five-year plan by a 14-7 vote at a meeting at the University of California at Los Angeles.

Berkeley Council member Alan Goldfarb said he is optimistic that "we can work out something here that will be a benefit to the community and those who typically hang out there."

"It's important we have a new vision for the park," he said, adding that he hopes community services will be maintained for the homeless and others who use it.

An 18-member oversight committee, composed of nine representatives from the university and nine from the city, will decide the final details of the plan.

People's Park, once the center of violent protests in the 1960s, has since evolved into a haven for the homeless and for drug dealers.

The new partnership "ensures that we'll have

Fossil find sparks debate over human origin

By Thomas H. Maugh II
Los Angeles Times

BERKELEY — Researchers announced dramatic new finds yesterday from a 3-million-year-old boneyard in Ethiopia that promise to kindle fresh debate about the earliest known human ancestors, a species best-known for a dwarfish skeleton called "Lucy."

After a 14-year period during which they were unable to visit Ethiopia, researchers from the Institute of Human Origins here returned to the Lucy site in the remote and desolate Afar region last October and found 18 major fossils from 15 individuals.

In 1974, paleoanthropologist Donald C. Johanson and his colleagues from the institute stunned the anthropological community when they discovered the 3.5-foot-tall Lucy at Hadar. She was the oldest known hominid, or member of the human family, and was of an entirely new species.

The new discoveries, the researchers said, confirm the first hominids' similarity to the apes that preceded them, providing new insight into their evolutionary biology.

These fossils, said paleoanthropologist William Kimbel, will "throw fresh wood on the fire" of two ongoing debates: whether another, more recent human ancestor coexisted with Lucy and her kin, and whether humankind during the period were still partially tree-dwellers or spent most of their time walking the vast savannas upright.

Among their most important finds are a jawbone that looks very much like 8- to 12-million-year-old apes that were long extinct when Lucy

Jason Kidd and Tanda Rucker are considered the top two high school basketball players in Northern California.

Eastbay prep teams flying high

Six basketball squads go into state championships at Arena

By Miki Turner
Tribune staff writer

From Oakland to Moraga and from San Ramon to Hayward, Eastbay high school basketball is bigger than ever.

Today, two of the area's top teams vie for the ultimate prize at the Coliseum Arena — a Division I California Interscholastic Federation state championship.

St. Joseph of Alameda is playing in its first-ever state final and facing the state's No. 1 ranked team, Fremont of Los Angeles, at 7 p.m.

A record six Eastbay teams in the championships indicates a resurgence of high school basketball here.

"There have always been good players here," said Al Attles, assistant general manager of the Warriors. "But for some reason, there are just more of them now. I can't really explain why . . . maybe it's that they are getting more publicity. I'm not going to say that they are more in tune to the game, they might just be better players."

Two of those better players, both All-Americans, can be credited with attracting nationwide attention to the Eastbay in the '90s.

Jason Kidd (25.6 points per game) of St. Joseph is a junior who does just about everything imaginable on the basketball court — even the unimaginable.

"I'm really impressed by Jason," Cal women's coach Gooch Foster said. "He does things that someone his age just shouldn't be doing."

Considered the nation's top junior class player, Kidd has been attracting national attention since middle school. The 17-year-old point guard, who has been profiled on ESPN's Scholastic Sports America and featured in Sports Illustrated, is expected to be the most highly recruited player ever from Northern California.

Ken Turner, an assistant coach and recruiter at Kansas State, witnessed the Kidd show at last summer's Nike camp in Princeton, N.J. He too, was amazed.

"He's going to be one of the all-time greats," Turner said. "When I first saw him I couldn't believe he was just in high school."
